CAREER HIGHLIGHTS

Quantitative Investing: 8+ years of experience in designing and implementing multi-asset class investment strategies.
Portfolio Construction: Led the full lifecycle of quantitative equity portfolios from development to implementation.
Risk Management: Built the risk infrastructure to drive capital discipline for institutional balance sheets.
Leadership & Communication: Skilled at translating quantitative analysis into recommendations for stakeholders.

WORK EXPERIENCE

Adjunct Lecturer I Bentley University, *Waltham MA* Jan 2025 — Present

- Teach undergraduate courses in finance connecting core investment theory to real-world application.

Lead ESG Data Analyst I Private Family Office, Sustainable Impact Fund, *Remote* Feb 2020 — Oct 2024

- Defined the fund's initial ESG investment universe focused on mid-cap and small-cap Indian companies.
- Built a web scraping tool to collect sustainability data from company disclosures, annual reports, and BRSR filings.
- Maintained a database covering 100+ Indian companies, converting their ESG disclosures into usable metrics.
- Validated company disclosures against independent environmental sources to improve data reliability.

Quantitative Portfolio Strategist I PNC Asset Management, *Philadelphia PA* Jun 2016 — Sep 2019

- Developed a stratified-sampling methodology to replicate the MSCI US REIT Index with low predicted tracking error, reducing client expense ratios by 75%.
- Managed the full lifecycle of a quantitative REIT portfolio, including conducting research, designing, rebalancing, corporate actions management, providing risk oversight, and running performance attribution.
- Supported investment decisions impacting $5B in AUM through multi-factor risk modeling for index replication.
- Advised senior leadership and authored internal research papers adopted across the investment platform.

Bank Investment Risk Analyst I PNC Financial Services Group, *Pittsburgh PA* Jan 2015 — Jun 2016

- Developed analytics to measure counterparty credit and market risk across bank investment portfolios.
- Identified a material issue in historical risk reporting, leading to reconstruction of the underlying risk aggregation model.
- Monitored daily, monthly and quarterly risk exposures, volatility, and limit adherence across institutional portfolios.
- Supported FRTB transition from VaR to Expected Shortfall for economic capital calculations.
